

# A Message from the Creative Cobras of

Room 1004.

Hi Ms. Rea. We are the Creative Cobras of Grade 2. You have probably heard about us from our teacher Mr Rea. Our unit at the moment is called Discovery and amongst other things we have been learning to discover what is beyond Earth by using scientific thinking. We have had an idea for a way that we would like to increase our learning by visiting the Community Garden. But first let us fill you in on what we have been doing.

During our research we discovered something called the Eden Project which we heard that you had been to, which is made up of Biomes or Biospheres. We were also investigating the wonders of the Solar System and it made us question if it would be possible to live on other planets and how people could do this. We also found something about this in a Discovery Channel Video. We decided we would like to investigate Biomes further.....

Hi Ms Rea its Mr Rea,

Our class have been enjoying this investigation, the request for which came from them. So far this investigation has been really useful.

- That it is making the children think about the unique weather conditions that we have on Earth compared to the rest of the Solar System and how this has been conducive to life.
- It is giving the children the chance to be scientists and set up experiments involving predicting, observing and reflecting on what can be learned.
- There has been lots of connection and collaboration.

Yesterday Yanna and Eloise asked if we could place some biospheres in the very hot and very shady areas of the Community Garden which is somewhere where we love to go and sometimes have snack or read there. The hot could simulate the rocky inner planets and the shadier areas some of the moons of the gas giants. This way we can observe growth and share our learning with the rest of the school community. Could it be possible for us to do this?

Warm wishes, Creative Cobras 😊
